PROFESSIONAL SUMMARY

AI & Data Science engineer with hands on experience building production grade LLM systems, RAG pipelines, and computer vision solutions.Developed a semantic chunking RAG framework achieving 25% improvement in answer relevancy; developed image classification pipelines with 0.2s inference latency at 50x speed gains. Proficient in Python, LangChain, TensorFlow and cloud deployment.

EDUCATION

Bikaner Technical University, Rajasthan, India *April 2026*
Bachelor of Technology in Artificial Intelligence & Data Science
CGPA: **8.9 / 10.0**

EXPERIENCE

Success Ladder Technologies Pvt Ltd. — *Software Development Intern* *Sept 2025 – March 2026*

- Engineered a Market Intelligence & Audit Automation System, improving reporting accuracy and reducing manual audit workload.
- Built a scalable Web Image Scraping Framework for automated data collection and preprocessing.
- Architected an automated image classification pipeline with a 0.2s inference latency, achieving a 50x increase in processing speed compared to manual auditing and reducing operational overhead by 30%.
- Designed RESTful APIs using FastAPI to serve ML model predictions, reducing integration time for downstream teams.

PROJECTS

SemRAG-GPT — Advanced RAG Framework GitHub Repository

- Semantic Chunking Engine: Developed a custom RAG pipeline that replaces fixed-size chunking with semantic-based segmentation, utilizing cosine similarity between sentence embeddings(via transformer) to maintain contextual integrity.
- Contextual Retrieval: Optimized document indexing to preserve semantic coherence, reducing "broken context" issues common in standard RAG systems and improving answer relevancy by 25%.
- Indexed document embeddings using FAISS for sub-100ms similarity retrieval; integrated Hugging Face sentence-transformers for domain-agnostic semantic search without fine-tuning overhead.

Web Scraper And Image Classifier GitHub Repository

- Hierarchical AI Pipeline: Applied prompt engineering and built a vision system using BLIP (captioning) and CLIP (zero-shot labeling) to categorize images with 0.2s inference latency.
- Automated the extraction and structuring of thousands of images into labeled datasets, reducing manual preparation time by 90%.
- Engineered a Playwright scraper to bypass dynamic JS rendering and anti-bot measures using auto-scrolling and proxy rotation.

Marketing Audit & Analytics Platform **Jan 2026 – Feb 2026**

- Developed a full-stack analytics engine to automate data ingestion and real-time auditing for Meta and Google Ads.
- Optimized ad spend allocation using MAB-based budget modeling,improving ROAS across Meta &Google ads.
- Extracted and visualized granular KPIs (CTR, CPC, Conversion Rates) into a centralized dashboard, reducing reporting time by 70%.

TECHNICAL SKILLS

- **AI/ML & LLMs:** PyTorch, TensorFlow, Scikit-learn, LangChain, Hugging Face, Ollama, Retrieval-Augmented Generation (RAG), Transformer Models, Embedding Models, Semantic Search, Prompt Engineering, Agentic Workflows, Fine-tuning, MLOps
- **Computer Vision & NLP:** OpenCV, BLIP, CLIP, NLP, Deep Learning (ANN, CNN, RNN)
- **Infra & Deployment:** FastAPI, Flask, Docker, AWS, CI/CD, Inference Optimization, Git
- **Data Analytics:** Pandas, NumPy, SQL, Power BI, Tableau
- **Languages:** Python, C++, JavaScript, SQL
- **Web Technologies:** MERN Stack, Next.js, HTML/CSS

ACHIEVEMENTS

- **Finalist, Smart India Hackathon 2023:** Recognized as a national finalist among thousands of teams for developing an innovative solution to a complex problem statement.
- **Deep Learning, NLP and GPT Technologies** – Upflairs Pvt. Ltd. (2025)
- **Machine Learning, Power BI and Tableau** – Skill Ocean (2024)
